Helps identify the high-risk personality traits (impulsiveness, distractibility, rule-resistance, irritability, etc.) that lead to human error and preventable incidents.

Provides useful business intelligence for decision support around safety initiatives, culture, employer branding, employee engagement, and more.

Reveals each participant's workstyle, strengths, and areas for improvement. Results can be used for hiring, training, and performance management.

"We have been extremely pleased with the SQ™ assessment. It's quick and easy to use, but most importantly it works. Our injury rate has dropped 80% over the past two years, and that is in part due to the SQ™... I'd recommend it for any progressive leader looking for gains in their safety program."
